EDUCATION

MJIT – Universiti Teknologi Malaysia (UTMKL) <i>Bachelor of Software Engineering — Kuala Lumpur, Malaysia CGPA: 3.50 / 4.00 — Dean's List 2022/2023</i> - Published thesis on personal finance tracking with OCR for income tax readiness - Relevant coursework: Software Engineering, AI/ML, Operating Systems, Computer Architecture, Data Structures & Algorithms	2021 – 2025
Maple Leaf International School <i>A Levels: 1A, 2B — O Levels: 6A*, 1A, 1B — Dhaka, Bangladesh</i>	Completed

WORK EXPERIENCE

Joget Inc. <i>Software Developer Intern — Hybrid</i> - Built and deployed enterprise workflow automations and UI components on Joget DX, enabling clients to digitize and streamline core business processes across multiple departments - Integrated REST APIs with external services, improving data-flow efficiency and reducing manual effort by 30% - Collaborated in Agile sprints with senior engineers, QA, and product managers to design, test, and ship scalable applications used in production environments - Strengthened expertise in cloud deployment, CI/CD pipelines, and end-to-end SDLC for production-grade systems	Oct 2024 – Mar 2025
--	---------------------

PROJECTS

InterviewPilot – AI-Powered Mock Interview Platform GitHub <i>Python FastAPI SQLAlchemy React + TypeScript Groq API (Whisper-large-v3, Llama 3.3 70B) Docker GitHub Actions</i> - Architected a full-stack mock interview platform (FastAPI/SQLAlchemy backend, React + TypeScript frontend) using Whisper-large-v3 for speech transcription and Llama 3.3 70B for interview evaluation - Designed a rubric-based evaluator returning schema-validated JSON (technical accuracy, clarity, depth) with a self-correcting repair loop that re-prompts the model on its own invalid output - Built an agentic follow-up question generator that reasons over a candidate's answer to decide whether to probe deeper, mirroring real interviewer behavior - Backed by conventional-commit discipline, a pytest suite with fully mocked Groq calls, a Dockerfile for reproducible deployment, and GitHub Actions CI on every push
--

AI Chatbot Engineer Assessment (Mindhive Asia) GitHub <i>FastAPI RAG Text2SQL</i> - Designed a multi-turn conversational AI with stateful memory and intent-based agentic planning, handling 3-5 related user turns seamlessly - Built FastAPI microservices including a RAG-powered product knowledge endpoint and a Text2SQL outlet-query endpoint, tested against 200+ product documents with SQL injection protection - Delivered a complete repository with OpenAPI specification, test suite, architecture diagrams, and hosted demo, showcasing production-ready chatbot engineering

WC26 Predictor – World Cup 2026 Forecasting Dashboard GitHub <i>Python XGBoost FastAPI React TypeScript Recharts</i> - Built an end-to-end football analytics pipeline using historical match results, FIFA rankings, rolling form, squad proxies, head-to-head history, and match-context features - Modelled match outcomes, expected goals, and scoreline probabilities, then ran Monte Carlo simulations for group qualification, knockout paths, finalists, and champion probabilities - Delivered an interactive dashboard with tournament-path curves, group-pressure matrices, player-form impact views, match-uncertainty plots, and predicted-vs-actual audit metrics

AI Financial Fraud Detection System <i>Python XGBoost Scikit-learn FastAPI Streamlit</i> - Engineered an ensemble ML pipeline combining Random Forest, XGBoost, and Isolation Forest on 284,807 real transactions, achieving ROC-AUC of 0.98 and PR-AUC of 0.89 on held-out data - Handled a 0.17% fraud rate using SMOTE and class-weighted loss, prioritizing PR-AUC for rigorous imbalanced-class evaluation - Built a modular inference service with FastAPI, Pydantic validation, OpenAPI documentation, and a Streamlit dashboard for batch scanning and explainability

Other Projects FitSync – AI Fashion Platform (Flutter, FastAPI, Supabase): modular AI-recommendation backend integrating Groq/Hugging Face, delivering suggestions in under 2 seconds ExpenSense – Personal Finance AI (Flutter, Firebase, OCR, TensorFlow): OCR receipt-scanning and classification pipeline, 85% categorization precision across 500+ receipts/month AI-Eye – Computer Vision for Accessibility (Python, TensorFlow, CNN/ANN, TTS): real-time text-recognition and speech system, 92% OCR accuracy, sub-second inference HalalXperience (Flutter, Firebase, ML Kit) and Clinic Management System (Java Servlets, Spring, MySQL): barcode-based halal verification app and a role-based clinic CRUD system with optimized SQL queries

ACHIEVEMENTS & LEADERSHIP

- Dean's List Academic Excellence — 2022/2023 - Top Performer, Computational Intelligence (2023) - Secretary Treasurer, SOFEA Society (2022–2023); organized AI workshops for 200+ students - myHCI-UX Student Design Challenge (Oct 2025): Gold Medal and Best Video Award for outstanding user-experience design and innovation among national university teams

TECHNICAL SKILLS

GenAI / LLM Systems: RAG, Agentic Workflows, Text2SQL, Prompt Engineering, Structured Output Validation, Groq API, Whisper, LLM Eval & Repair Loops
Programming Languages: Python, Java, C++, JavaScript, TypeScript, Dart, SQL
AI/ML & Data: XGBoost, Scikit-learn, TensorFlow, Computer Vision, CNN/ANN, OCR, Predictive Analytics, Monte Carlo Simulation, Hugging Face
Frameworks & Tools: FastAPI, React, SQLAlchemy, Recharts, Spring, Flutter, Vue.js, Git, Firebase, Supabase, Streamlit
Cloud & Architecture: AWS, Docker, REST APIs, Microservices, CI/CD (GitHub Actions), Android Studio, Unity
Core CS: Data Structures & Algorithms, OOP, Operating Systems, Databases, Software Engineering
