

ADNAN MASHRUR SADAD

SOFTWARE ENGINEER | BACKEND & FULL-STACK DEVELOPMENT

Kuala Lumpur, Malaysia | +60 11-3968 7435 | adnanmashrursadad@gmail.com

GitHub | LinkedIn | Portfolio

Software engineering graduate with enterprise development experience at Joget. Builds API-backed applications with Python, FastAPI, React, and SQL, with hands-on testing, CI, and cloud deployment experience.

Technical Skills

Languages: Python, SQL, Java, TypeScript, JavaScript, Dart

Backend & Applications: FastAPI, Pydantic, SQLAlchemy, React, Flutter, Firebase, REST APIs

Engineering & Deployment: Git, GitHub Actions, Docker, Google Cloud, Redpanda, PyFlink, automated testing

Experience

Software Developer Intern | *Joget Inc.*

Oct 2024 - Mar 2025

- Built and deployed **Joget DX workflow automations and UI components** for client teams, working with senior engineers, QA, and product managers in Agile sprints.
- Integrated **REST APIs** to remove manual data re-entry and maintained application modules through recurring production release cycles.

Selected Projects

InterviewPilot | Full-Stack Interview Application | GitHub

2026

- Built a **React and FastAPI** application supporting persistent interview sessions, audio transcription, answer evaluation, and report generation.
- Implemented **schema validation, repair loops, and bounded AI follow-ups**; provided clearly disclosed fallback scoring when AI services were unavailable.
- Verified **19 backend tests with 89% statement coverage** and automated browser checks in CI covering session creation through report generation; isolated external AI calls with mocks or disabled integrations.

Driftline | Streaming Pipeline and Inference API | GitHub

2026

- Built a **Redpanda/PyFlink streaming pipeline** replaying 590K transactions and served XGBoost inference through an **ONNX/FastAPI API** on a 4-vCPU Google Cloud VM.
- Load-tested **10,018 requests with zero failures and 380 ms p95 latency at 50 concurrent users**.
- Implemented drift-triggered retraining and a shadow promotion gate to compare candidate and incumbent models on the same holdout before promotion; unit-tested the graph pipeline's data-leakage boundary.

ExpenSense | Personal Finance Mobile Application

Final-Year Project

- Developed a **Flutter/Firebase** application with OCR-powered receipt scanning, automated expense logging, and expense classification for income-tax readiness.
- Integrated the **OCRSpace API** for receipt extraction and Firebase cloud synchronisation for cross-device access.

Research

AI Evaluation Research | First Author

2025 - 2026

- Built a **1,382-instance Text-to-SQL benchmark across 20 databases** to evaluate answerability under schema changes; manuscript complete, not yet submitted.
- Investigated incorrect regulatory scope in cited AI answers for **SAFE-RAG**; short paper under review at ALTA 2026.

Education

Universiti Teknologi Malaysia (UTM), MJIIT | Kuala Lumpur | 2021 - 2026

B.Sc. Computer Science (Software Engineering) with Honours | **CGPA: 3.43/4.00**

Dean's List: 2022/2023, 2025/2026.

Awards & Leadership

Gold Medal & Best Video Award, myHCI-UX Student Design Challenge (Oct 2025).

Secretary Treasurer, SOFEA Society (2022 - 2023); organised AI workshops for 200+ students.
